Dowel Bar Retrofit Blades

Dowel Bar Retrofit is a successful application in joining and stabilizing the concrete slabs of older concrete roadways that were not originally built using dowel bars. Wel-Co has been involved with this application since it's inception. Today we manufacture some of the freest cutting blades while maintaining the lowest cost per slot.

Wel-Co's saddle segment provides the free cutting necessary in this application

Application Specs

DBR-25 Hard aggregate

DBR-35 Soft to medium aggregate

DBR-45 Limestone or other
soft abrasive aggregates
