

Refractory Wet Blades

Refractory Wet Blades

Wel-Co Wet Cut Refractory Blades are high quality blades designed to provide the lowest cutting cost and highest performance with bonds for cutting virtually all refractory material.

Available Sizes

14" x .115, 18" x .125, 20" x .145

Application Specs

R-1	For cutting extremely hard refractory brick such as high alumina (90% and higher) and fused cast products
R-1.5	For cutting high alumina refractory (80% to 90%)
R-2	A long life blade for cutting hard refractory brick such as high alumina (70% and higher), super duty and hard basic
R-3	For fast cutting and long life on medium hard refractory brick such as 50% alumina brick. Also recommended for cutting a mixture of hard and soft refractory brick
R-4	For fast cutting and long life on medium refractory brick such as 50% silica. Also recommended for cutting a mixture of medium and soft refractory brick
RS-07-8	Same as RS-07 except that it has an extra 1/16" of usable diamond depth
RS-20	A low initial coast blade for cutting hard refractory brick such as high alumina (70% and higher), super duty and hard basic
RS-25	For cutting a range of refractory brick in a glass tank. This one blade can be used to cut brick from hard to soft with a larger % of material being hard
RS-30	For fast cutting and long life on hard abrasive refractory material such as silicon carbide
